Summary

I am a Senior Computer Science student at Eastern Washington University, minoring in Cybersecurity. With a strong foundation in full-stack development and cybersecurity, I have hands-on experience working with a variety of programming languages and frameworks, including Java, JavaScript, Python, Flask, React, SQL, and more. I thrive on solving complex coding challenges and embrace both independent problem-solving and collaborative teamwork to develop innovative, user-focused solutions. Driven by a passion for continuous learning, I am always eager to refine my skills and contribute to impactful projects.

Education

Eastern Washington University

Jan 2023 – June 2025

Bachelor of Computer Science, Cybersecurity Minor, GPA: 3.82 (Senior Standing)

EWU Dean's List (11x Recipient)

Springboard Software Engineering Career Track Bootcamp

May 2020 – July 2021

Received Certificate of Completion for 700+ hours of hands-on course material, with 1:1 industry expert mentor oversight, and completion of multiple in-depth portfolio projects. Mastered skills in front-end web development, back-end web development, databases, and data structures and algorithms.

Eastern Washington University (Running Start)

Sept 2017 – June 2019

Completed college coursework through dual enrollment program during Junior and Senior years of high school, earning simultaneous high school and college credits.

Technical Skills

- **Languages:** HTML, CSS, JavaScript, Python, Java, C, C++, SQL, R
- **Front-End Development:** React, Vue, Bootstrap
- **Back-End Development:** NodeJS, Express, Flask, PostgreSQL, MySQL, NoSQL, Firebase, APIs
- **Other:** Git, GitHub, Linux, Jupyter Notebooks, Wireshark, Agile Workflow

Recent Projects

Trademark Analysis & Identification Tool (Senior Capstone) *React, Python, Flask, YOLO/PyTorch, Electron*

- Developed a computer vision-based desktop Electron application to detect, track, and analyze brand logos in diverse types of images and video footage.
- Leveraged machine learning and image recognition techniques using a customly-trained YOLO model built with PyTorch.
- Built with a React frontend and a Python Flask backend in collaboration with two other team members.
- Measured brand visibility, screen-time, and prominence to generate targeted analytics and actionable insights.
- Designed for marketers and event organizers to assess advertising ROI, optimize campaigns, and enhance sponsorship effectiveness.

Get A Grip Golf Company Website *TypeScript, Vue, CSS, Firebase*

- Built a website for a mobile golf company tailored to the owner's specifications.
- Prioritized ease of use for both end users and the site administrator.
- Developed the frontend using TypeScript and Vue for a responsive and interactive user experience.
- Utilized Firebase for backend services, including NoSQL database, authentication, storage, and hosting.

K-Means Clustering Algorithm *Java*

- Implemented the K-Means clustering algorithm from scratch in Java.
- Grouped data points into k clusters based on Euclidean distance.
- Developed core functionalities including: random centroid initialization, cluster assignment, centroid recalculation, and convergence detection.
- Completed without the use of any external libraries to reinforce understanding of clustering fundamentals.

Professional Experience

Amazon Fulfillment Center

Training Ambassador

Aug 2022 – Dec 2022

Fulfillment Center Associate

Aug 2021 – Aug 2022
